

Energy efficient & intelligent battery charging

Together we pursue your goals:

- Reduced carbon footprint
- Lower overall costs
- Safe and standard-compliant charging processes
- Maximum availability of forklift fleet
- Increase competitiveness

For future-proof intralogistics

We support you in making your company fit for the future: Be it by switching to electrically powered forklifts in your intralogistics, the use of efficient chargers or the combination of battery charging technology and photovoltaics.

Your partner for holistic solutions

Analysis and Consulting

Concept and Planning

Assembly and Installation

Ongoing Support

Control of success

Our solutions:

Energy analysis and consulting

We analyse your current situation independent of manufacturer and technology and show you possible savings and optimisation potentials. Always with the aim of reducing your costs and increasing your availability and performance. Based on identified potentials we can also support you with regard to charging processes, battery technologies and connectivity solutions.

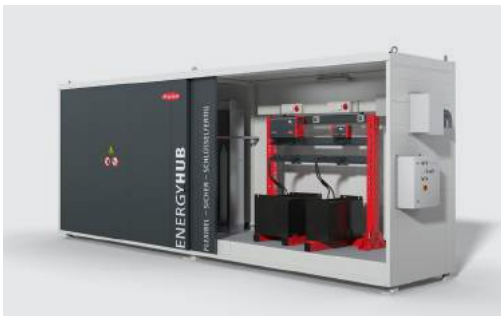

Sustainable battery charging solutions

With the »Selectiva 4.0« and »SelectION« charger families, we offer energy-efficient and advanced solutions for charging lead-acid as well as lithium-ion batteries. We also support you in combining your charging infrastructure with an innovative photovoltaic system from Fronius.

Charge & Connect

The cloud-based software solution Charge & Connect connects directly to your charging infrastructure and provides real-time data on its availability and status. Numerous analysis functions help you to detect application errors at an early stage and derive measures to reduce costs and increase performance. In this way, you benefit from more transparency across all charging stations and greater efficiency in your intralogistics.

Individual battery charging systems

We will find a customised and standard-compliant system solution for your company, be it for individual charging points, battery rooms or charging stations - indoors or outdoors. We provide you with a carefree overall package that is adapted to your needs and can be expanded on a modular basis.
